

## Description

Efflorescence Remover is a clear liquid which is a blend of inorganic and organic acids and surfactants to clean efflorescence on concrete and masonry surfaces.

## Uses

Efflorescence Remover can be used on concrete, precast, cast-in-place, aggregate, brick, stone surfaces, mortar, and masonry units.

## Application

- Efflorescence Remover can be used at different dilution ratios between 2 -1 to 10-1 depending upon the type of masonry and the magnitude of the efflorescence problem
- For best results test a diluted solution of Efflorescence Remover on surface before general use
- Apply solution with acid-resistance brush or sprayer
- Let the solution work on the surface for 5-15 minutes
- Rinse thoroughly with clean water until all foam disappears
- Repeat applications may be needed depending upon the level of contamination

## Limitations

Do not mix with other cleaners

Keep from freezing

Efflorescence Remover must be stored in plastic containers not metal containers

Protect adjacent surfaces and foliage from overspray

When diluting Efflorescence Remover always add Efflorescence Remover to the diluting water. Never add water to Efflorescence Remover.

## Precautions

Keep out of reach of children

Protective clothing, gloves and eye protection should be worn

Use in well ventilated areas

Protect all non-targeted surfaces, window glass, vehicles, aluminum, paint films and plant life from overspray. Remove overspray immediately with soap and water. Hose down any foliage in the area with water prior to using Efflorescence Remover.

## Clean Up

Clean tools and equipment with clean water immediately after use. Wash hands and unprotected skin with soap and water.
